

### **‘Gujarat’ Hydra Truck: - The loading / Unloading truck**

- Hydra Truck is extensively used for loading – unloading dies, tools, moulds, cases, textile bales, drums etc.
- Hydra truck has found application on shop floors, warehouses, handling & unloading lorries, lifting & lowering machine parts etc
- Basically, there is a over hang between the platform in the raised condition and the straddle legs. Hence, the platform is able to travel further into the machine even though the straddle leg stops when it strikes the base of the machine.
- A unique feature is the adjustable platform which may be tilted backwards and forwards to facilitate load handling
- The platform can be embedded by conveyor rollers, ball transfer units which would make it multi directional. (Optional feature)

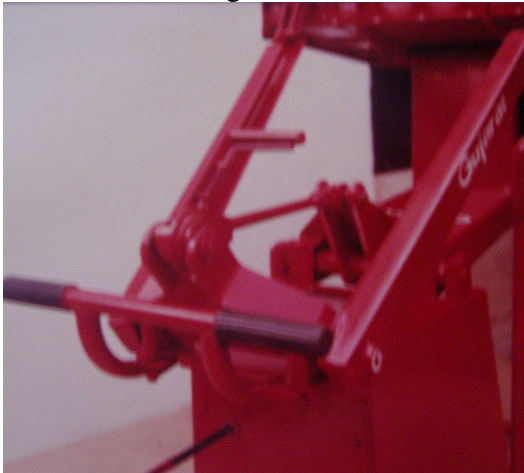

1. Hydra Truck in Action

2. conveyor roller platform

3. Platform Tilting Lever Mechanism

4. Hydra Truck in raised height
