

Oil Seals

We provide finest quality Oil Rubber Seals which when mounted correctly, can withstand a large amount of pressure. These can be used in hydraulic cylinders to prevent hydraulic fluid leakage and allows the system to withstand the pressures developed during operations.

We manufacture different types of oil seals of single lip profile and double lip profile that are used in various industrial applications. We use synthetic rubbers to manufacture various types of seals. Our range is offered in different colors, shapes and sizes. We also take manufacturing orders for customized product development.

Raw Materials:

- HNBR
- Viton
- Silicone
- Nitrile

In addition, we can also make seals from other rubber materials, as per the client's preferences.
