Duration of 1 unit of Treatment

3 month

. Thalassemia is one of the most challenging form of hematological disorders. Ninety percent of the children develop symptoms of anemia in the first two years of birth, requiring blood transfusions for rest of their lives.

. About 100,000 babies worldwide are born with severe forms of the disease each year. Thalassemia occurs most frequently in people of Italian, Greek, Middle Eastern, South Asian (Indian Sub-continent) and African ancestry.

. Approximately 100,000 children born with Thalassaemia in the world, among them about 10,000 cases are in India. In certain Indian population like Assamese, Bengali, Gujarati, Maharashtrian, Marwari and Punjabi, as high as 25% of the population are silent carriers of a defective Thalassaemia gene, while mildly anemic are not otherwise affected by the illness. In Gujarat itself Thalassaemia is very common in some castes like Bhanushalis, lohana, Sindhi, Meman, Khoja, Jain and Brahmin.

. Thalassemia is also known as Mediterranean anemia or Cooleys anemia is a genetic blood disease. People born with this disease cannot make normal heamoglobin, which is needed to produce healthy red blood cells.

. The two main types of thalassemia, alpha and beta, are named for the two protein chains that make up normal heamoglobin. The genes for each type of thalassemia are passed from parents to their children. There are mild and severe forms of the disease, the latter often called Cooleys anemia.

## **ALPHA THALASSEMIA**

Alpha thalassemia occurs when one or more of the four genes needed for making the alpha globin chain of heamoglobin are variant or missing. Moderate to severe anemia results when more than two genes are affected. Alpha thalassemia major can result in miscarriages.

## **BETA THALASSEMIA**

Beta thalassemia occurs when one or both of the two genes needed for making the beta globin chain of heamoglobin are variant. The severity of illness depends on whether one or both genes are affected, and the nature of the abnormality. If both genes are affected, anemia can range from moderate to severe.

. People with mutation only in one gene are known as carriers or are said to have thalassemia minor. Thalassemia minor results in no anemia or very slight anemia. People who are carriers do not require blood transfusion or iron therapy, unless proven to be iron deficient.

## **GENERAL SYMPTOMS OF THE DISEASES:**

. Children born with thalassemia major usually develop the symptoms of severe anemia within the first year of life.

. Symptoms Lacking the ability to produce normal adult heamoglobin, children with thalassemia major:

↳ are chronically fatigued

↳ fail to thrive, and

↳ do not grow normally

. Prolonged anemia will cause bone deformities and eventually will lead to death within the first decade of life. The only treatment to combat severe anemia is regular blood transfusions

### **TREATMENT PROCEDURE**

Internal Ayurvedic Medicine to manage general symptoms of thalassemia as well as the iron overloading disorders.

Result oriented and clinically proven 100% Ayurvedic standardized herbal medicine. The clinical trial of this medicine has been done successfully on more than 100 patients. The polyherbal medicine is free from adversities.

### **QUALITY ASSURANCE**

We know that our treatment deals with human lives and therefore with utmost faith in nature, we believe in only highest quality standard herbs by taking individual body constitution into consideration and under strict quality processes. Which are non- hazardous & non-toxic without any side effects?

### **SHIPPING**

We ship world wide to most of the countries through DHL COURIERES by providing door step delivery.

### **PAYMENT METHOD**

You may have online purchase from our site [www.dotbenmoonpharmadotcom](http://www.dotbenmoonpharmadotcom). We offer PAYPAL payment gateway, the oldest and safest in the business from years.

### **DELIVERY TIME**

Within 10 days
