

FINSEAL 11

HORIZONTAL FORM FILL SEAL MACHINE

FINSEAL 11 HORIZONTAL FORM FILL AND SEAL MACHINE

FINSEAL is a horizontal-form-fill and seal machine that can pack variety of products like biscuits, chocolate bars, cakes, candies, buns, soap cakes, toiteries, engineering products/autoparts, rubber tubes, mosquito coils, syringes, tissue rolls etc. etc. in a pillow shaped package.

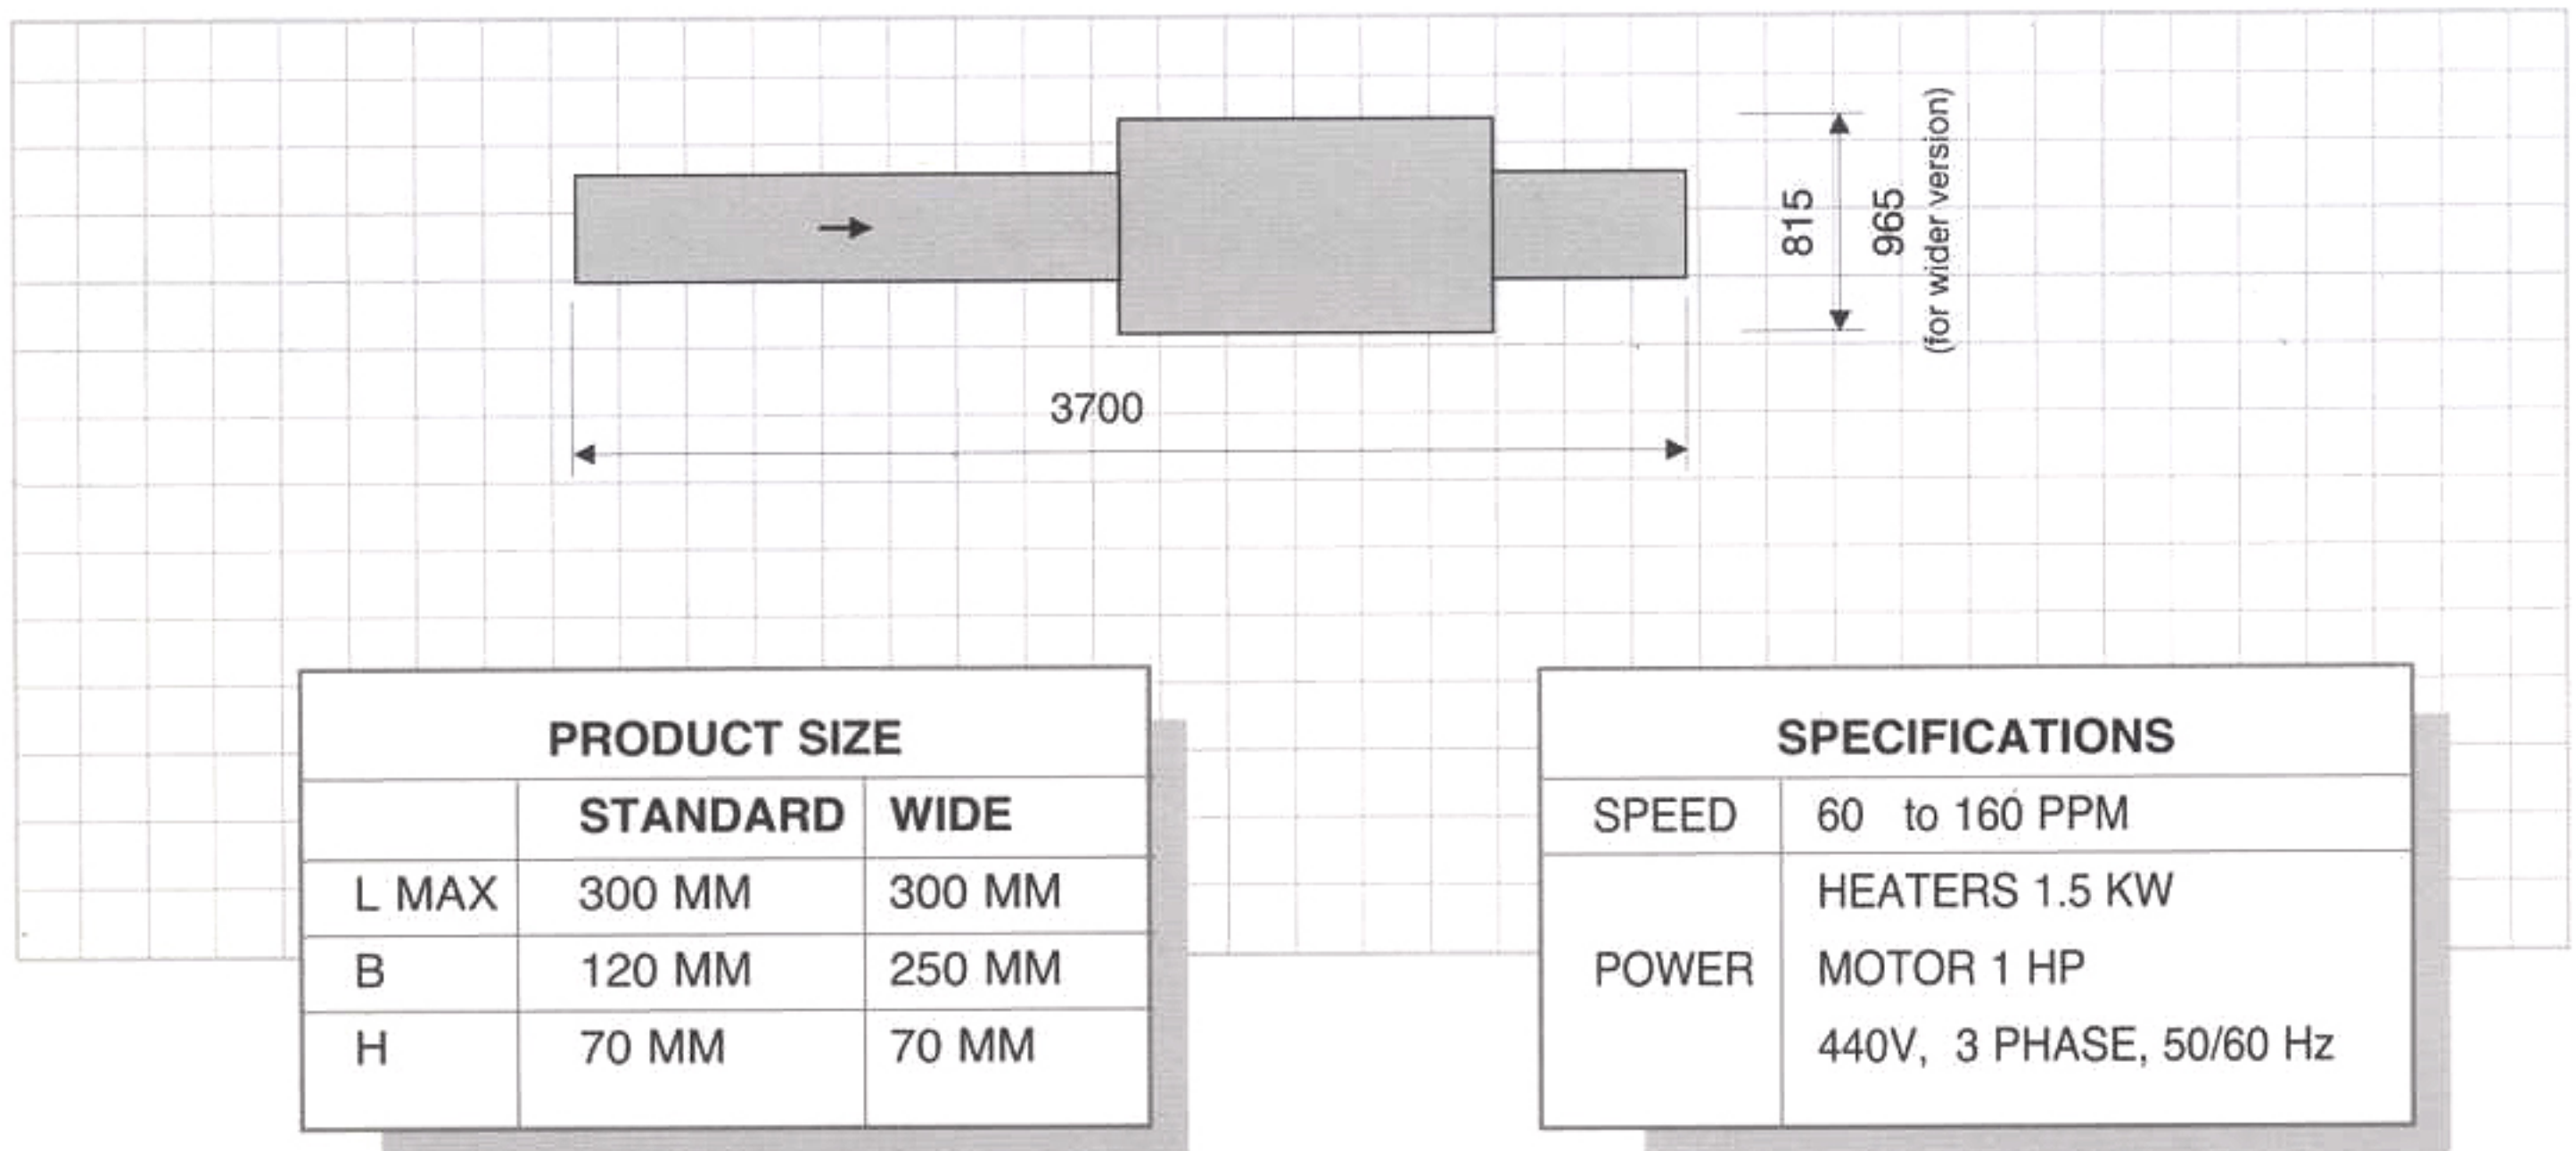

BOPP, pearlescent BOPP, polyester film, laminates and a variety of other films can be used as wrapping materials. The standard machine products are manually placed on the infeed conveyor, however, automatic feed systems to suit individual customer's requirement can also be developed.

Machine is made in two sizes, standard and wider version to cover vast range of products.

Features:

- All surfaces on which product slides are made of stainless steel.
- Long seal is done by three pairs of rollers.
- Axes of rollers can be tilted to get best results.
- Belt discharge conveyor.
- Heavy distortion-free cast structure amply proportioned to give vibration-free operation.
- Easy changeability of size.
- Low voltage heaters for safety.

- All bearings sealed for life to make them maintenance free.
- Automatic print registration device (optional).
- Torque slip clutch prevents damage because of accidental jams.
- Variable speed drive (optional).
- Castors to provide mobility to the machine for easy shifting (optional).
- Code/date printing unit (optional).
- Duplex cutting knife to get higher output for certain sizes of packets.

Other sizes can be considered on request.

Combination of dimensions may limit the extreme sizes.

Machine speed varies depending on physical characteristics and size of product and wrapping material

All sizes are in mm
